ISBN-10: 068984414X

ISBN-13: 978-0689844140

Product Dimensions: 12 x 0.4 x 9 inches

Shipping Weight: 13.8 ounces (View shipping rates and policies)

Average Customer Review: 4.5 out of 5 stars 70 customer reviews

Best Sellers Rank: #36,629 in Books (See Top 100 in Books) #8 in Books > Science & Math > Astronomy & Space Science > Solar System #30 in Books > Children's Books > Education & Reference > Science Studies > Astronomy & Space > Astronomy #672 in Books > Children's Books > Science, Nature & How It Works

Age Range: 4 - 7 years

Grade Level: Preschool - 2

Customer Reviews

GREAT book! My daughter absolutely loves it. Great quality pages, and content. We're very happy with the purchase!

My two boys (3 and 2) love this book. I really like it. It's great how each page keeps the previous planets on it, so you see the whole solar system by the end. There are stickers at the end that I made color copies of and we glued onto a long sheet of paper making our own solar system (if you have one child you can just use the actual stickers). They love the book. Also FYI: it does still include Pluto in there, but as a dwarf planet.

I just bought this as a gift for a 5 yr old boy and it is above and beyond my expectations. The pages are 'stepped' in a consequential sequence relating to distance from the Sun. So as you open each

new page the planet is displayed further to the right, moving away from the Sun at the left of the book. This really helps illustrate the planets and their order - nearest, farthest etc. Also each planet has a beautifully and simply written poem, good for reading aloud. There are some stickers in the back but the book is great without them. The illustrations are lovely too. A very good choice for an inquisitive 4 - 9 year old.

Good starter book Age 7 really likes it.

Even though this had some poor reviews, I took a chance on it. It was pretty much what I expected. Simple language, but eloquently written. I love how the pages are different sizes and teach about the distance of our galaxy in the design. Fun book. My 4 year old son enjoys it.

A+

My 3 year old is obsessed with all things solar system. I love this book because of its vibrant pictures and the poem. I also like that as you turn the page, you still see the previous planet. The only "downside" was the sticker page at the end. The book suggests that the stickers are reusable -- not quite so if your son sticks them all over the toilet. :(

This makes a nice addition to the astronomy books I keep for my interested 3- and 5-year-old grandsons. It's simple enough for the 3-year-old and another 3-year-old friend of his has borrowed it twice, so I know it's a hit. Beautiful illustrations and clear language.
