Logically organized, the chapters flow in a uniform sequence from an introduction to the low vision patient, to examination, to low vision devices, to systems available to benefit the patient. This is followed by more sophisticated testing information and networking, and is tied in with case histories. From beginner to experienced practitioner, this book is geared toward optometrists and ophthalmologists involved in low vision care. Optics, pathology, visual status and psychosocial issues are considered in discussions of low vision systems design and prescribing strategies. The magnificent work of the author has helped us to start working with low vision patients at a small low vision clinic that has been recently created. As I am from South America, all the information that the author wrote down the book was perfectly right for my patients, even though they are so different. It's an interesting book that is practical, and also fully developed for the Ophthalmologist or Optometrist that work with the low vision patients.

This book provided exactly the type of information I was looking for. For the eye care professional with no previous low vision experience, it may be a little overwhelming but for those of us wishing to delve more into the specifics of low vision care, it is perfect.
